Question 1

Correct

Marked out of 5.00

Create a class Student with two private attributes, name and roll number. Create three objects by invoking different constructors available in the class Student.

Student()

Student(String name)

Student(String name, int rollno)

Input:

No input

Output:

No-arg constructor is invoked

1 arg constructor is invoked

2 arg constructor is invoked

Name =null , Roll no = 0

Name =Rajalakshmi , Roll no = 0

Name =Lakshmi , Roll no = 101

For example:

Test	Result
1	No-arg constructor is invoked 1 arg constructor is invoked 2 arg constructor is invoked Name =null , Roll no = 0 Name =Rajalakshmi , Roll no = 0 Name =Lakshmi , Roll no = 101

Answer: (penalty regime: 0 %)

```

1 public class Student{
2     private String name;
3     private int rollno;
4     public Student(){
5         this.name=null;
6         this.rollno=0;
7         System.out.println("No-arg constructor is invoked");
8     }
9     public Student(String name){
10        this.name=name;
11        this.rollno=0;
12        System.out.println("1 arg constructor is invoked");
13    }
14    public Student(String name,int rollno){
15        this.name=name;
16        this.rollno=rollno;
17        System.out.println("2 arg constructor is invoked");
18    }
19    public void display(){
20        System.out.println("Name =" + name + " , Roll no = " + rollno);
21    }
22    public static void main(String[] a){
23        Student stu1= new Student();
24        Student stu2=new Student("Rajalakshmi");
25        Student stu3=new Student("Lakshmi", 101);
26        stu1.display();
27        stu2.display();
28        stu3.display();
29    }
30 }
31

```

	Test	Expected	Got	
✓	1	No-arg constructor is invoked 1 arg constructor is invoked 2 arg constructor is invoked Name =null , Roll no = 0 Name =Rajalakshmi , Roll no = 0 Name =Lakshmi , Roll no = 101	No-arg constructor is invoked 1 arg constructor is invoked 2 arg constructor is invoked Name =null , Roll no = 0 Name =Rajalakshmi , Roll no = 0 Name =Lakshmi , Roll no = 101	✓

Passed all tests! ✓

Question 2

Correct

Marked out of 5.00

Create a class called "Circle" with a radius attribute. You can access and modify this attribute using getter and setter methods. Calculate the area and circumference of the circle.

Area of Circle = πr^2

Circumference = $2\pi r$

Input:

2

Output:

Area = 12.57

Circumference = 12.57

For example:

Test	Input	Result
1	4	Area = 50.27 Circumference = 25.13

Answer: (penalty regime: 0 %)

Reset answer

```

1 import java.io.*;
2 import java.util.Scanner;
3 class Circle
4 {
5     private double radius;
6     public Circle(double radius){
7         // set the instance variable radius
8         this.radius=radius;
9     }
10
11     public void setRadius(double radius){
12         // set the radius
13         this.radius=radius;
14     }
15
16
17     public double getRadius()    {
18         // return the radius
19         return radius;
20     }
21
22     public double calculateArea() { // complete the below statement
23         return Math.PI*radius*radius;
24     }
25
26     public double calculateCircumference()    {
27         // complete the statement
28         return 2*Math.PI*radius;
29     }
30 }
31 class prog{
32     public static void main(String[] args) {
33         int r;
34         Scanner sc= new Scanner(System.in);
35         r=sc.nextInt();
36         Circle c= new Circle(r);
37         System.out.println("Area = "+String.format("%.2f", c.calculateArea()));
38         // invoke the calculateCircumference method
39         System.out.println("Circumference = "+ String.format("%.2f",c.calculateCircumference()));
40
41     }
42 }
43

```

	Test	Input	Expected	Got	
✓	1	4	Area = 50.27 Circumference = 25.13	Area = 50.27 Circumference = 25.13	✓
✓	2	6	Area = 113.10 Circumference = 37.70	Area = 113.10 Circumference = 37.70	✓
✓	3	2	Area = 12.57 Circumference = 12.57	Area = 12.57 Circumference = 12.57	✓

Passed all tests! ✓

Question 3

Correct

Marked out of 5.00

Create a Class Mobile with the attributes listed below,

```
private String manufacturer;
private String operating_system;
public String color;
private int cost;
```

Define a Parameterized constructor to initialize the above instance variables.

Define getter and setter methods for the attributes above.

for example : setter method for manufacturer is

```
void setManufacturer(String manufacturer){
    this.manufacturer= manufacturer;
}
```

```
String getManufacturer(){
    return manufacturer;}

```

Display the object details by overriding the toString() method.

For example:

Test	Result
1	manufacturer = Redmi operating_system = Andriod color = Blue cost = 34000

Answer: (penalty regime: 0 %)

```
1 public class Mobile{
2     private String manufacturer;
3     private String operating_system;
4     public String color;
5     private int cost;
6     public Mobile(String manufacturer, String operating_system, String color, int cost){
7         this.manufacturer = manufacturer;
8         this.operating_system=operating_system;
9         this.color=color;
10        this.cost=cost;
11    }
12    public void setManufacturer(String manufacturer){
13        this.manufacturer=manufacturer;
14    }
15    public String getManufacturer(){
16        return manufacturer;
17    }
18    public void setOperatingsystem(String operating_system){
19        this.operating_system=operating_system;
20    }
21    public String getOperatingSystem(){
22        return operating_system;
23    }
24    public void setColor(String color){
25        this.color=color;
26    }
27    public String getColor(){
28        return color;
29    }
30    public void setCost(int cost){
31        this.cost=cost;
32    }
33    public int getCost(){
34        return cost;
35    }
36    public String toString(){
37        return "manufacturer = " + manufacturer + '\n' +"operating_system = "+ operating_system+ '\n' +"color = '
38    }
39    public static void main(String[] a){
```

```
40 |         Mobile mo=new Mobile("Redmi", "Andriod", "Blue", 34000);
41 |         System.out.println(mo);
42 |     }
43 |
44 | }
```

	Test	Expected	Got	
✓	1	manufacturer = Redmi operating_system = Andriod color = Blue cost = 34000	manufacturer = Redmi operating_system = Andriod color = Blue cost = 34000	✓

Passed all tests! ✓
